

McStas web interface

Johan Sejr Brinch Nielsen

DTU – Technical University of Denmark
FYS – Department of Physics

4th of December 2012

McStas

Outline

- 1 Motivation
- 2 Design
- 3 Example 1: Simple simulation
- 4 Example 2: Scanning a parameter
- 5 Features

Motivation

- Students can focus on simulating and ignore the system details. Few steps from configuration to results.

Motivation

- Students can focus on simulating and ignore the system details. Few steps from configuration to results.
- Easy to share results and collaborate, as the simulation data is hosted on the server.

Motivation

- Students can focus on simulating and ignore the system details. Few steps from configuration to results.
- Easy to share results and collaborate, as the simulation data is hosted on the server.
- Simple front-end for an advanced system; the server may run the simulation on multiple cores via MPI.

Design: Many to Many

Example 1: Simple simulation

- Configuration
 - Instrument
 - Parameters
 - Neutron rays
- Simulation ... (on the server)
- Results!
 - Plots
 - Data files
 - Instrument design drawing

Configure your simulation

Select the simulation and its parameters. [[List latest simulations](#)]

Step 1: Select simulation

Choose simulation:

TASsimple	▲
TAStutorial	
TOFexercise_final3	
h8_test	
reflectometer	▼

Step 2: Configure parameters ([Documentation](#))

Lambda:

[2.36]

Step 3: Runtime configuration

Seed:

Rays (ncount):

Scan num-points:

Save

Run this config!

An web-based interface for [McStas](#).

mcstas-02.risoe.dk/sim/status/47hj00Q4rfjGBO1m8ZHp__2012-12-04_15:23:12.648550

h8 test: 2012-12-04 15:16:35

Lambda: 2.2
(reconfigure)

Data plots [LIN] (click here for logarithmic - or press 'L')

Instrument layout

[layout.vrml](#)

Simulation output

[mcstas.tar.gz](#)

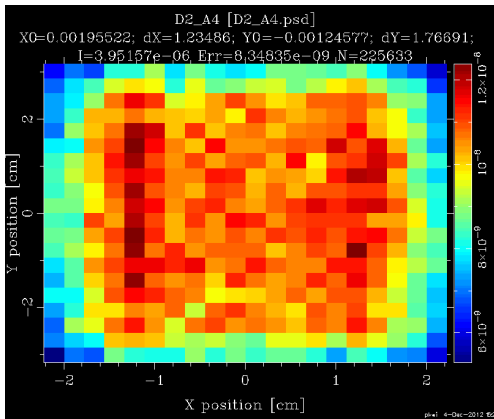

[h8_test_instr](#)

[stdout](#)

[stderr](#)

An web-based interface for [McStas](#)

Example 2: Scanning a parameter

- Configuration, like before *plus*:
 - *Parameter intervals to scan over (min and max values)*
 - *Number of points to try within the intervals*
- Simulation ... (on the server)
- Results!
 - *Scan point to look at*
 - Plots
 - Data files
 - Instrument design drawing

Configure your simulation

Select the simulation and its parameters. [[List latest simulations](#)]

Step 1: Select simulation

Choose simulation:

Step 2: Configure parameters ([Documentation](#))

Lambda: [2.36]

Step 3: Runtime configuration

Seed:

Rays (ncount):

Scan num-points:

Features

- An easy way to simulating experiments!
- Authentication: only some can run simulations
- Permalinks: All URLs are permanent and can be shared across users
- Easy for the administrator to add new instruments (not yet possible for users)
